UNICORN DIGITAL COURTROOM

Hybrid Digital Courtroom Platform

Tech Unicorn's flagship platform designed to deliver a seamless, hybrid courtroom experience that mirrors and enhances traditional court proceedings. It supports remote, in-person, and hybrid hearings with a focus on accessibility, procedural integrity, and operational efficiency.

Courtroom Experience

Hybrid Hearing Support
Virtual, in-courtroom, or mixed participation with dynamic layouts

Courtroom Controls
Elevated controls for judges and clerks to manage sessions

Simultaneous Interpretation
Integrated multilingual audio channels for real-time interpretation

Live Streaming
Public or restricted livestreams with access controls

Breakout Rooms
Private rooms for sidebar conversations with PSTN support

Digital Hallway

Pre/Post-Hearing Interaction
Secure space for attorneys and participants

Chat & Calling
One-on-one or group communication

Court Announcements
Real-time updates from court staff

Equipment Testing
Device readiness and bandwidth tools

User Journeys

Judges
Dashboards, hearing controls, participant management, broadcasts

Clerks
Schedule hearings, calendars, admit participants, logistics

Participants
Mobile/desktop access, secure authentication, announcements

UNICORN DIGITAL COURTROOM

Additional Capabilities

Integrated Services

uRecord
Multi-channel courtroom audio/video recording with speaker isolation

uTranscribe
Real-time speech-to-text and translation in 75+ languages with speaker attribution.

uView
Playback with searchable transcripts, scene classification, and certified transcript workflows.

uSign
Real-time collaborative editing with e-signature support

Evidence Management
Secure submission, controlled presentation, and docket access for exhibits

Security & Architecture

Hosted on Azure
Deployed in client-specific Azure tenants with full compliance and data sovereignty

Authentication & Access
Role-based permissions, PIN-based access, and voice signature verification

System Architecture
Supports both cloud-native and on-premise deployments with Kubernetes, GitOps (Argo CD), and centralized API management

Analytics & Insights

Hearing Analytics
Tracks attendance, hearing durations, and participant engagement

Sentiment Analysis
Monitors user feedback and interaction trends to guide improvements.

Court Dashboards
Configurable views for workload, staffing, and KPIs

COURTROOM RECORDS WITH AI SPEAKER IDENTIFICATION

Electronic Courtroom Recording Solution

Tech Unicorn's electronic courtroom recording solution, designed for hybrid, remote, and in-room proceedings. Captures high-fidelity audio and video, integrates with case management systems, and supports real-time transcription when bundled with uTranscribe.

Recording Capabilities

Multi-Channel Recording
Supports up to 8 isolated audio channels for clear capture of every participant.

Video Support
Records synchronized video alongside audio, compatible with MP4 and other standard formats

Microphone Isolation
Ensures clean separation of speaker audio, critical for transcription and playback accuracy

Recording Workflow

Record → Playback → Annotate → Export

Ecosystem Compatibility

uView
Enriched playback and certified transcripts

uTranscribe
Real-time transcription and translation

UDC
Seamless courtroom platform integration

INTELLIGENT HYBRID RECORDING

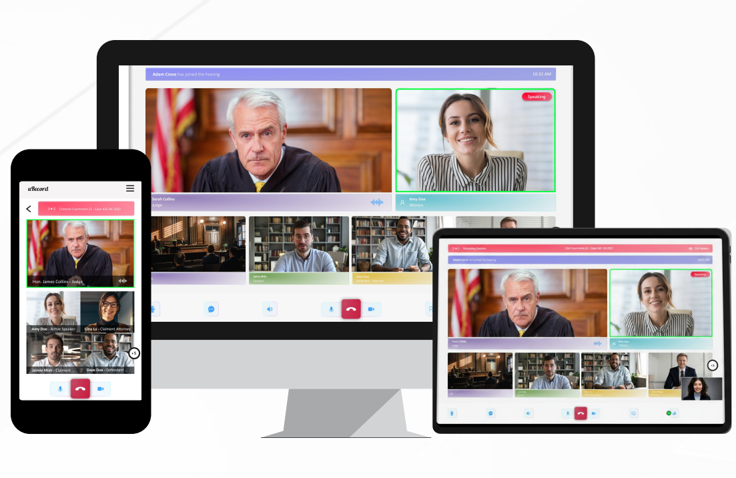
AI, Security & Integration

AI-Powered Capabilities

Speaker Identification
Multi-channel courtroom audio/video recording with speaker isolation

Playback Enrichment
AI-enhanced playback includes timestamped logs, speaker tags, and searchable transcripts

Real-Time Transcription & Translation
Provides transcription and translation in 100+ languages with uTranscribe.



Security & Access

Encrypted Exports
Secure offline export of recordings for authorized use

Sealing & Redaction
Supports marking hearings as confidential with RBAC controls for access

RBAC & MFA
Role-based access control with Azure AD/Entra ID integration and multi-factor authentication

Deployment & Integration

Flexible Deployment
Dedicated courtroom PCs, shared devices, or laptops with USB mics

CMS Integration
Syncs with case management for metadata and organization

Remote Monitoring
Real-time management of multiple courtroom sessions.

LIVE TRANSCRIPTION & NOTE-TAKING

AI-Powered Transcription & Translation Platform

Tech Unicorn's AI-powered transcription and translation platform designed for real-time, multilingual courtroom and justice system use. Delivers live, speaker-attributed transcripts with high accuracy, even in low-resource or remote environments.

Core Transcription Capabilities

Real-Time Transcription
Live searchable rough transcripts for hearings and interviews.

Speaker Recognition
AI identifies speakers in real time, even with shared microphones.

Voice Signature Matching
Matches speakers to known voice profiles for identity verification.

Recording Workflow

100+ Languages
Real-time translation globally

WCAG 2.1 AA | Screen reader | Font adjustments

Workflow & Integration

Proofreading
In-app editing before filing

Connects with case management
Connects with case management

Interactive Transcripts
Annotate, highlight, and comment

Browser-Based
No downloads required

CLOUD, HYBRID, HIGH AVAILABILITY ARCHITECTURE

CJIS and FedRAMP Compliance

Performance & Metrics

Ambient Noise Suppression
Filters background noise to improve transcription clarity in courtrooms

Confidence Indicators
Flags low-confidence transcriptions for review and verification

Security & Access

Accuracy Benchmarks

95%+
English Accuracy
High-fidelity transcription with custom vocabulary training

85%+
Other Languages
Consistent quality across 100+ supported languages

Deployment & Infrastructure

Azure Cloud-Based
Deployed via Infrastructure-as-Code on Microsoft Azure, with CI/CD pipelines, Key Vault integration, and DevOps automation

Seat-Based Licensing
Supports concurrent session limits, host management, and license overage handling with buffer periods and admin alerts

Key Benefits

Accessibility
LEP support with 100+ languages

Efficiency
Real-time transcription reduces delays

Accuracy
AI-powered with custom vocabulary

Security
Court-owned, compliant infrastructure

Flexibility
Remote and low-resource compatible

Integration
Seamless CMS connectivity

LIVE TRANSCRIPTION & NOTE-TAKING

Advanced Transcript & Playback Platform

Tech Unicorn's advanced platform designed to transform courtroom recordings into structured, searchable, and multilingual digital transcripts. Enhances post-hearing access, transparency, and usability of judicial audio content for both internal court users and public-facing stakeholders.

Playback Features

Enriched Listening
Follow AI transcripts while listening for improved clarity.

Text-Searchable Audio
Keyword search to instantly locate transcript moments.

AI-Powered Capabilities

Isolation & Attribution
AI distinguishes speakers in complex courtroom settings.

AI Analysis
Auto-Scene & Keywords – Splits recordings for easy review.

Language Translation
Live Translation – Converts transcripts into 100+ languages instantly.

Integration & Deployment

Standalone or Bundled
Operates independently or as part of UDC suite

Open Format
All-Format Support – Any recording type

Cloud-Hosted or On-Premise
Deployed in Azure Government Cloud or hosted by Tech Unicorn, ensuring data sovereignty and security compliance

Editing & Transcript Management

Official Workflow
AI draft for certified transcribers to review and approve line by line

Recording Mgmt
Configurable interface with metadata indexing and case association

Collaboration
Asynchronous workflow for transcribers and court staff
