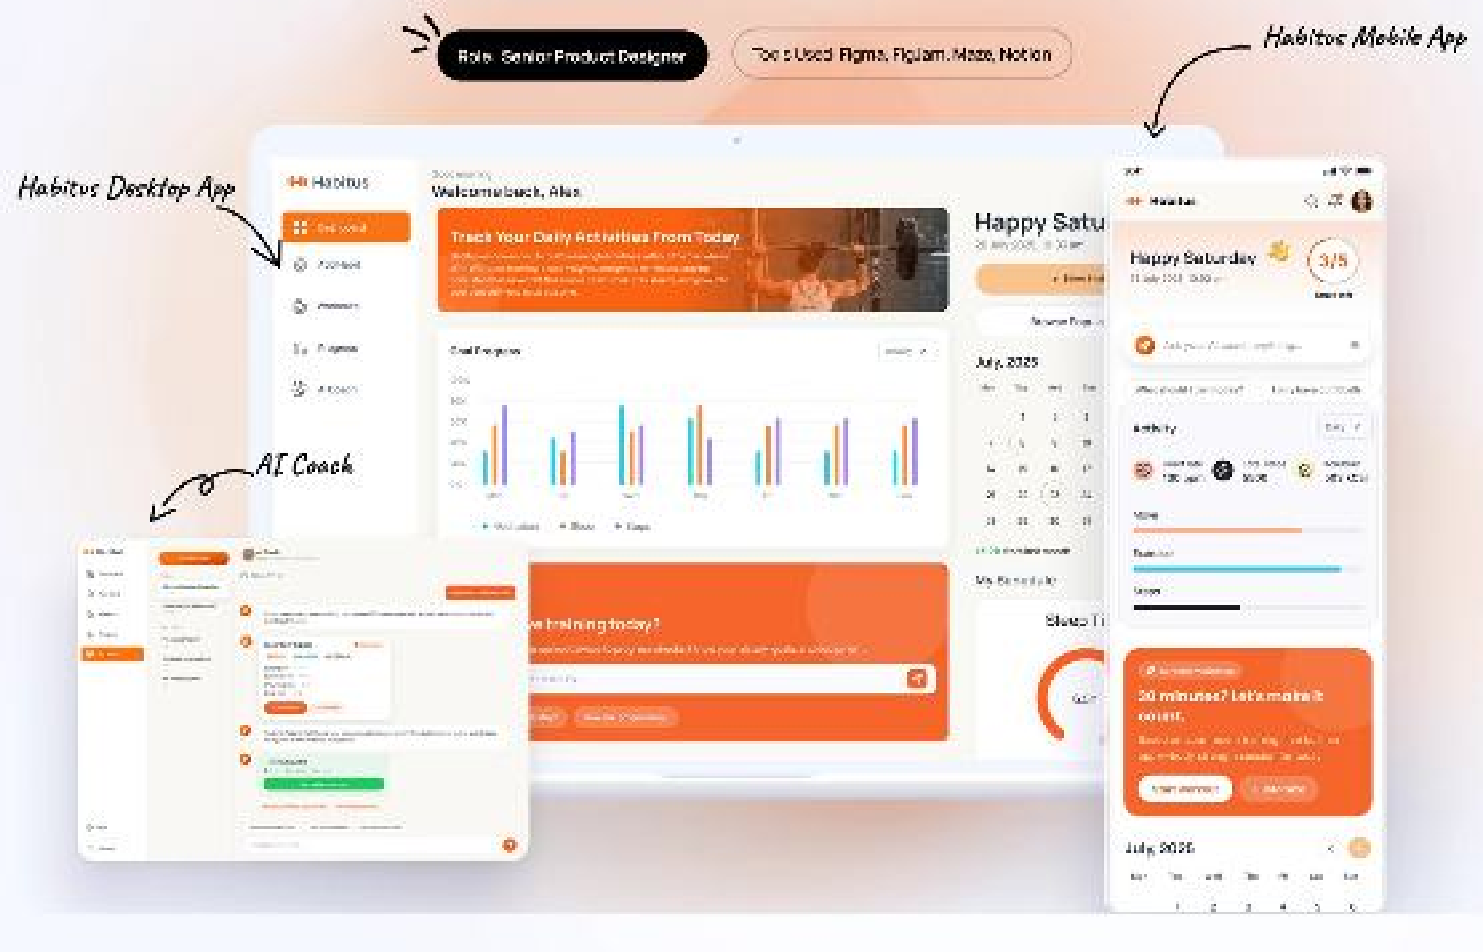
Habitus

Habit Tracker, now with an AI coach

Start changing your life for good. A habit tracker that stopped just recording behaviour and started coaching it — with AI-suggested workouts, readable progress, pattern insights and in-app support.

Role: Senior Product Designer | Tools Used: **Figma, FigJam, Maze, Notion**



The Brief

How might we help people who already track their habits know exactly what to do next — without handing control of their routine over to a machine?

About Habitus

Habitus is a habit-tracking app built to help users turn small daily intentions into routines that last. While v1 focused on tracking habits, streaks, and completion, it lacked the guidance to keep users engaged beyond the initial weeks. V2 introduces AI insights, using users' history to provide meaningful progress summaries, behavioral patterns, personalized recommendations, workout suggestions, and on-demand support—shifting Habitus from a passive tracker into a more proactive personal coach.

Discover

User Research

I've conducted extensive web research to understand the users' goals, needs, and pain points through online behavior patterns, reviews, forums, and competitor analysis.

User 1
Age: 21
Status: Single
Occupation: Student

Personality: [illegible] [illegible] Thinker [illegible]

"I sometimes struggle with consistency. For instance, when I have to go on a trip, it disrupts my streak. The time and effort I invested in building the habit feel wasted. This lowers my motivation, and I find myself not wanting to bother since the streak will break anyway."

Pain Points
- Statistics are adversely affected during travel and illness, and the effort put into winning streaks goes to waste.
- Since habits don't work based on location, reminders keep popping up unless manually intervened.

User 2
Age: 44
Status: Single
Occupation: Lawyer

Personality: Adaptable Creative Hardworking

"I would like to know why I'm doing what I'm doing in the habit tracking apps I use. For example, why should I run for 30 minutes a day? Having a purpose makes me feel better about doing things."

Pain Points
- Trying to do habits without understanding why they are done and without having a purpose doesn't create motivation.

Competitive Analysis

I have made an analysis of the most commonly used habit applications.

Competitive Name	Custom Habit	Habit Categories	Streak Structure	Gamification	Location Reminder	Learning	Friends	Challenges	Detailed Statistics	Vacation Mode	Coach Support
Habit Tracker	✓	✓	✓				✓		✓	✓	
Productive	✓	✓	✓		✓	✓		✓	✓	✓	✓
Habit	✓	✓	✓								
Habitminder	✓	✓	✓						✓	✓	
Habitify	✓	✓	✓		✓		✓	✓	✓	✓	
Habit Share	✓	✓							✓		
Done	✓	✓	✓	✓					✓		
BetHabit	✓	✓				✓	✓	✓	✓		✓

Pain Points & Key Features

Based on interviews and research to understand the goals, needs and the pain points of the users.

Pain Points		Key Features
? There is a search for a purpose to start habits	→	✓ Engaging content and habit communities can be encouraged through contests.
? Carrying on the habit program alone creates a feeling of loneliness.		✓ The continuity of the habit can be ensured by creating social interactions with friends, lovers or communities acting for the same purpose.
? Users could see they were falling behind but had no idea how to get back on track.		✓ AI-suggested workouts generated from goals, available time and past completion behaviour.
? Building a workout or routine from scratch took too long, so most people never finished setup.		✓ Plain-language progress summaries that explain what changed this week and why it matters.
? One missed day broke the plan; nothing adapted to travel, illness or a heavy work week.		✓ Insight cards that spot patterns — best time of day, risky days, streak-breaking triggers.
? One missed day broke the plan; nothing adapted to travel, illness or a heavy work week.		✓ An always-available AI companion for swaps, substitutions and a nudge when motivation drops.
